

Harness the full value of digital manufacturing and operations

accenture

AVEVA

Accenture and AVEVA empower organizations to harness the value of digital transformation in core manufacturing and operations across the asset lifecycle. We bring together Accenture's recognized industry domain and digital technology expertise with AVEVA's leading industrial software.

Our end-to-end solutions help clients use intelligence at speed and scale to create the future of industry today, reinventing design, engineering, production, operations and maintenance services.

Tomorrow starts today

Intelligence powers today's industrial revolution. By embedding intelligence into engineering, manufacturing and operations, organizations can accomplish what was unthinkable a few years ago. Multiple sites talking to each other. Manufacturing networks running on their own. Digital twins revolutionizing product design. Endless possibilities with the digital transformation of industry.

Yet industrial organizations are struggling to maximize their digital technology investments, risking their future competitiveness and growth. Accenture analysis reveals that only 31,5% of manufacturers are achieving meaningful outcomes from digitalization. And just one-third of the owner-operators and engineering, procurement, and construction companies that Accenture surveyed are benefiting from investments made in recent years to build digital and data capabilities for capital projects.

Delivering on the promise of digital

Accenture and AVEVA bring the industry insights, innovative solutions and delivery excellence to help organizations close this gap between digital investment and outcomes. For years, we have helped engineering and construction firms and manufacturers in discrete, process-based and hybrid industries reinvent how they engineer, operate and perform. Our new alliance partnership brings even more digital power to these organizations. We are two recognized and respected who together excel at:

Combining digital and industry know-how

No one has more experience applying digital technology and specialized solutions in industrial settings. We have a track record of large-scale transformation driven by IT/OT integration, big data and real-time analytics, IIoT and sensor technology, machine learning and artificial intelligence, digital twin/thread and more. We focus on the intersection of technology innovation and human ingenuity to drive business outcomes. In addition, our core competencies across strategy, innovation and technology span numerous industry verticals: Automotive; Aerospace and Defense; Life Sciences; Enterprise High Tech; Chemicals; Industrial Equipment; Architecture, Engineering and Construction; and Consumer Packaged Goods and Retail; and Oil and Gas.

Maximizing return on digital investments

Digital transformation is a massive financial commitment. Working with us, industry players get the confidence that they can protect their investments in the short- and long-term. With the software and the services/integration partner teaming from the start, organizations can significantly de-risk the cost of implementation efforts while accelerating speed to market. We help our clients leverage product capability beyond the initial point solution, tying capability to business need to realize maximum value at go live. These benefits are grounded in a strong working relationship refined over a decade of collaboration.

Speeding breakthrough outcomes at scale

Manufacturers typically struggle to prioritize and scale digitalization efforts across engineering and operations at the speed of market innovation. Digital investments are often focused within discrete pockets of the asset life cycle, creating organizational silos that make it difficult to realize digital transformation across the enterprise. Our combined approach is holistic because it drives change across people, process and technology. We bring the ideal combination of local nuance and global resources that is necessary to prioritize and implement meaningful transformation quickly.

Reduce costs, spur productivity and fuel growth with AVEVA's advanced industrial software tailored to your needs and backed by the resources of Accenture—a leader in the digital transformation of industry.

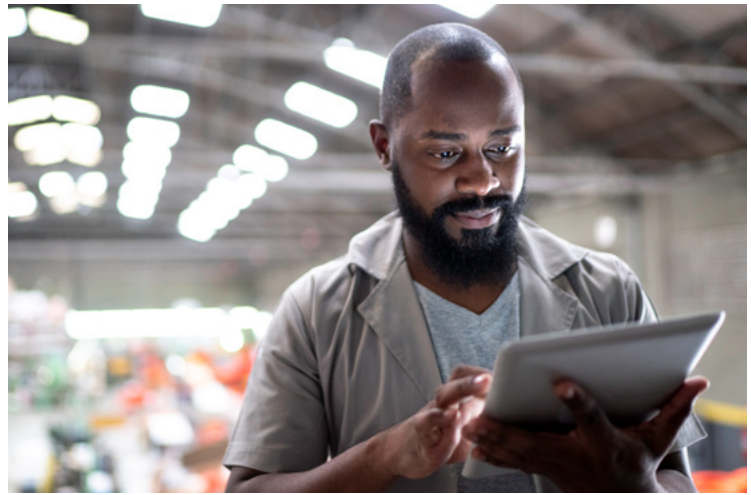

Accenture was named
Global SI Partner of the Year

The power of end-to-end offerings

Our partnership brings engineering and construction firms and industrial manufacturers value that they cannot get anywhere else—complete capabilities across data, engineering, operations and asset improvement all in one place. The result? Transformational business outcomes faster and with less risk.

Engineering and capital projects

Bringing technology and data together, creating a digital thread to transform the planning, design, management and execution of infrastructure, engineering and construction projects.

- Create efficient, asset intensive capital portfolios
- Improve project control and quality
- Increase on-time, on-budget projects
- Reduce safety and security risk

Operations excellence

Boosting performance and agility across manufacturing facilities and production operations with a closed-loop process supported by real-time analytics for continuous improvement.

- Make production processes more digital, flexible and insight-driven
- Produce higher quality products
- Bring new products to market faster
- Increase safety, compliance and sustainability of plant operations

Asset and performance management

Building confidence in asset performance and availability and lowering implementation risk with predictive maintenance that improves uptime and reduces operations costs.

- Increase asset availability and reliability
- Optimize asset output and ROI
- Reduce asset related operational risks and unplanned downtime
- Improve workforce efficiency

Cloud enablement

Powering a more intelligent and resilient value chain so that industrial companies can flex with changing demand, accelerating growth without sacrificing cost efficiency.

- Lower IT costs with on-demand computing and reduced IT footprint
- Support collaboration and data sharing
- Speed/scale use of digital technologies
- Support the sustainability agenda

AVEVA and Accenture are collaborating to transform intensive capital projects and operations through powerful technology and services that provides end-to-end offering. The partnership will digitally transform organizations by combining digital technology and specialized solutions for the industrial world maximizing returns, productivity, and delivering increased agility and sustainability to our customers.

About Accenture

Accenture is a global professional services company with leading capabilities in digital, cloud and security. Combining unmatched experience and specialized skills across more than 40 industries, we offer Strategy and Consulting, Interactive, Technology and Operations services—all powered by the world's largest network of Advanced Technology and Intelligent Operations centers. Our 537,000 people deliver on the promise of technology and human ingenuity every day, serving clients in more than 120 countries. We embrace the power of change to create value and shared success for our clients, people, shareholders, partners and communities. Visit us at www.accenture.com.
